GTSD
Global Tactical Safety & Defense Services LLC

Integrated Security Infrastructure

AI Powered Integrated Security Infrastructure
Security Begins Before the Emergency.

GTSD combines security leadership, operational technology, professional training and structured advisory services to help organizations manage risk, coordinate operations and strengthen accountability.

One company. Four core solution groups.

Organizations can begin with one service and expand as needs develop. A coordinated engagement does not require every customer to buy every solution.

GTSD Integrated Security Department

A managed security oversight and operational leadership model combining the agreed leadership, technology, advisory and preparedness capabilities around an organization’s existing operation.

GTSD Security Director

Outsourced governance, security advisory, vendor coordination, incident review and executive oversight. Virtual, shared and dedicated scopes are defined in writing.

GTSD Security OS

Security operations technology supporting operational workflows, incident records, reporting, authorized communications and management visibility. Features are confirmed during scoped demonstration and implementation.

GTSD Academy

Professional training, organizational preparedness and authorized programs. Training strengthens the people responsible for carrying out the security operating model.

How GTSD Connects the Operation

Understand Risk. Establish Leadership. Coordinate Operations.

Security readiness assessments identify vulnerabilities and priorities. Security Director establishes accountability. Security OS supports coordination and records. Academy develops personnel. Evidence, corrective work and reassessment support continuous improvement.

Supporting capabilities, one GTSD ecosystem

The GLOTAC Protocol supplies GTSD's methodology: Recognize, Assess, Observe, Prepare, Respond, Recover and Reassess. GTSD AI assists supported workflows with human oversight. Secure Your Spot supports customer and professional access, onboarding and service coordination.

What leadership receives

Deliverables may include assessment reports, prioritized recommendations, corrective action registers, incident analysis, security roadmaps, training priorities and recurring leadership reports. Responsibilities, cadence and deliverables are confirmed in the engagement scope.

Professional leadership and training

Tunku Rodrigues is Founder & CEO and a Security Technology Entrepreneur. His work spans security operations, professional instruction, business leadership and organizational preparedness. GTSD operates a Maryland approved 12 hour Initial Security Guard Training Program, listed as "ITP Global Tactical 12 hrs," with an approval period of November 1, 2024 through November 1, 2027. The USCCA instructor directory lists Rodrigues as a certified instructor. These listings are not endorsements of GTSD's other services.

Scope, availability and procurement

Engagements are scoped in writing. GTSD does not currently provide licensed security guard staffing. Personnel coordination relates to the client's existing authorized teams. Locations and delivery requirements remain subject to applicable licensing and confirmed availability. Training does not grant government authority, guarantee employment or replace licensing requirements. Guyana project inquiries are evaluated by scope; no local office or operating contract is represented here.
